3D printing has been the talk of the town. They say it is the third wave of the industrial revolution, and that it will change our world. But what does that mean? They also say it has the potential to unleash the creative potential in every child. And what does that look like? Here’s your chance to experience it first-hand.

Creatica is teaming up with YAYA 3D printing at the 2014 Hong Kong Mini-Maker Faire to bring to you an immersive experience to build a “corky ecosystem”.

**What is a Corky Ecosystem?** By turning recyclable wine corks into Corky organisms with 3D printing technology: YAYA 3D printing pen, we challenge each participant to channel their imagination and creativity and turn ideas into reality with us.

**About Us:** Creatica is rooted in the firm belief that knowledge is a consequence of experience, we strive to create and nurture a learning environment that encourages the widest, broadest, deepest range of experience for our kids.
